Insulated Conductors Committee of the IEEE Power Engineering Society

Correction Sheet

Issued 12 November 1997

The following corrections should be made to the standard:

Page 9, table 5: Change the reference for "Ionization test" (row 7, column 2) to **7.4.2.** Page 9, table 6: Change the reference for "Connector thermal and mechanical" (row 4, column 2) to **7.11.** These changes are shown on the following page.

Design test	Reference	Minimum number of samples required		
		4 (2) [*]	2	4
AC withstand voltage	7.5.1	Х		
DC withstand voltage	7.5.2	Х		
Impulse withstand voltage at 25 °C	7.5.3	Х		
Impulse withstand voltage at emergency temperature	7.5.3	Х		
Ionization test	7.4.2	Х		
Cycling aging (in air and water)	7.7.3	Х		
Ionization test	7.4.2	Х		
High-voltage time	7.8	Х		
Sectionalizer test	7.9	Х		
Shielding	7.10		Х	
Connector thermal and mechanical	7.11			Х

Table 5-Design tests and sequence for transition joints

*Two samples are required in air and two samples are required in water. (The two samples in water are not required if the joint design incorporates a solid metal housing that is welded or soldered to a solid cable sheath or pipe.)

Design test	Reference	Minimum number of samples required		
		3 (1) [*]	4	
AC withstand voltage	7.5.1	Х		
DC withstand voltage	7.5.2	Х		
Impulse withstand voltage at emergency temperature	7.5.3	Х		
Connector thermal and mechanical	7.11		Х	

*Three samples are required for 5-35 kV joints and one sample is required for 46-500 kV joints.
